

Four identical triangles are shown on this coordinate grid.

1) Complete the description of the following translations:

a) triangle A to triangle B = \_\_\_\_\_

b) triangle B to triangle C = \_\_\_\_\_

c) triangle C to triangle D = \_\_\_\_\_

2) Describe a different translation. Can your partner identify which triangles' positions you are describing?

\_\_\_\_\_

Translating a shape right 5, up 4 is the same as translating a shape right 4 and up 5.

1) Do you agree?

---

---

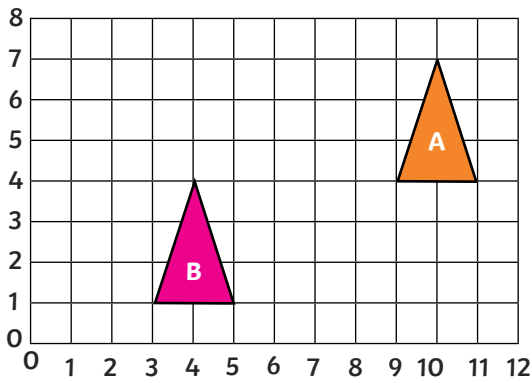

Triangle A has been translated left 4, down 6 to become triangle B.

2) Do you agree? Explain your reasoning.

---

---

Describe the translations you could do to piece together the shapes to make new shapes.

For example, triangle E could translate right 4, down 1 to make a trapezium with parallelogram F.
