

Maths Challenge

Make your own dice. You could use items from your recycling or you could use a net template , your dice can be big or small.

Here is my dice , I used a small box I found in my recycling and covered this using paper. I then drew on the spots (1-6)

Net Template

Maths Challenge

Play your snakes and ladders game.

Rules:

Each player takes turns rolling the dice to move up the board.

Once you have rolled the dice before you move up board, you must work out the sum and record this. For example if you are on 1 and you roll 6 on your dice , your sum will be $1+6=7$.

Optional Chilli Challenge: If you land on the part of the board where you need to move down, move down the board . The challenge is to work out how many spaces you moved back (taking away) and write your own sum. For example you have landed on 10 but you must travel down to 4. You now need to find the missing number, so I know $10 - \quad = 4$. You can count back on your board or use your number line to help find the answer. $10-6=4$

See My video to see me playing my game.
